sent key to select edit or delete.

➢ SOS SMS: Active or deactivate is optional

➢ SOS content: The content can be edit. The default message is "Please help me!"

2.4 BATTERY

The battery in original state has about 50% electricity and you can use it after unpacking. It performs

best after full charge/discharge for the first three times.

2.5 Installing the SIM Cards and the Battery

■   Hold the End key for a while to power off the mobile phone

■   Push the back cover above the battery and remove it.

■   Pull the left battery buckle outward and then lift the battery away.

■   Insert the 3G WCDMA SIM card into the SIM card slot lightly with the corner cutting of the card aligning to the notch of the slot and the gold plate of the card facing download, till the SIM card cannot be further pushed in.

With the metallic contacts of the battery facing the metallic contacts in the battery slot, press the battery down until it locks into place.

2.6 Charging the battery

Normally the remaining energy of the battery is indicated by the battery level icon at the upper right

corner of the display screen. When the battery energy is insufficient, the mobile phone prompts

"Battery low". If you have set an alert tone, an alert tone will be given off when the battery level is too

low. A charging animation appears when the battery is being charged. When the charging is complete,

the animation disappears.

2.7 Connecting to the Network

2.7.1 SIM card

Please inset a valid SIM card (user identification card) into the phone before using it. SIM card is the key for you to enter digital 3G WCDMA network. Inside the battery compartment you can see SIM card slot then insert your SIM card.

2.7.2 Unlocking the SIM card

By setting PIN1 (personal identification number) code of SIM card and handset lock code, you can protect your SIM card and phone from illegal use. When this function is put in use, you have to enter PIN1 code each time you power on your phone. To unlock the SIM card before you dial or receive calls, You may cancel the SIM card protection (referring to chapter "Security setup"), and in this case, the SIM card will be unable to prevent illegal use.

■ Press the END key to power on the phone.

■ Enter PIN1 code use M2 key to clear the incorrect input. If you enter a wrong PIN1 code for three times in a row, your SIM card will be locked by network and the phone will ask for PUK code. If you don't know the PUK code, do not enter any code and send your SIM card to the operator. Details can be referred to in chapter "Security setup"

2.7.3 Making calls

CORRECT DISPOSAL OF THE PRODUCT

INFORMATION FOR USERS

In reference to the art.13 of the legislative decree 25th July 2005, n. 151 "Implementing directives

2002/95/CE,2002/96/CE, regarding the reduction of the use of the dangerous substances in the electric and

electronic devices and the waste disposals"

The symbol of the crossed waste box on the device or on the packaging indicates that at the end of the life

of the device, it must be thrown separately from the other waste.

The person who throws the device must put it in the particular waste box in which there are only electric and

electronic waste or he must bring it to the retail to buy another similar device.

If everyone put the device in the precise waste box, it helps the environment, the health and the recycling of

the materials can be done.

The illegal disposal of the product leads the application of the administrative sanctions provided by the

existing standard.

CORRECT BATTERY DISPOSAL OF THE PRODUCT

The symbol of the crossed waste box put on the battery means that it must be thrown separately from the

other waste at the end of its life.

If chemical symbols Hg,Cd o Pb are on the it label means that in the battery there are mercury, cadmium

and lead with a superior level quantity determinated by the directive UE 2006/66.

So the battery must be correctly wasted as the substances inside can cause damages to the health and to

the environment.

Declaration of conformity:

We hereby declare that this product W30C/T501 has been tested by PHOENIX TESTLAB and passed the

required directives R&TTE DIRECTIVE 1999/5/EC of 9 march 1999 for the following specifications:
